THE ROADSIDE **PROTECTION FACTOR** —  
PASSIVE **SAFETY** REDEFINED

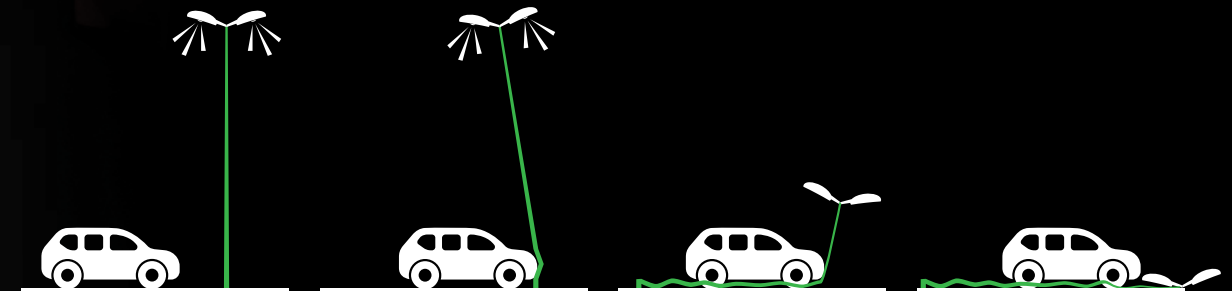

**PROTEC**POLES

## **PROTEC**POLES – PASSIVE SAFETY

In 2013 there were almost 2.5 million crashes on Germany's roads; in 3,339\* cases the consequences were fatal. The best way to protect yourself is to drive safely, but if a crash does occur then you shouldn't just have to rely on your guardian angel. This is why Euro poles has developed the **PROTEC**POLE, a light pole that absorbs the energy resulting from a collision with a car. The **PROTEC**POLE guarantees optimum safety on the side of the road for all road users.

- | Conically round poles thanks to state-of-the-art laser welding technology
- | Mounting heights of 4.5 m, 6 m, 8 m, 10 m, 12 m
- | Poles can be buried or baseplate mounted
- | Euro poles complete package: Foundation – pole – bracket
- | Ideal for motorways, country roads and cities
- | Certified to DIN EN 12767: HE3 & LE3
- | On-site crash testing facility
- | Technical support by Euro poles

## ***CREATIVE CONCEPTS***

---

To make our world a little simpler is our ambitious goal.

Our creative concepts are designed to get the most out of our products.

We are driven by safety, added value and innovative strength.
